**REVISION HISTORY**

|       |  |
|-------|--|
| Rev 1 | Initial Release.   |
| Rev 2 | Updated Modes of Operation Table. Added information on channel bandwidth support for 8GHz T/R 119 and 11GHz T/R 490 Models. Updated Channel Flatness, Frequency Accuracy, Power Dissipation, Size sections and Transmit Power and Noise Figure specs for 38GHz T/R 700 Models in ODU Specifications Table.   |
| Rev 3 | Updated Modes of Operation Table. Added Model Numbers for 18GHz T/R 1092.5 and 1120. Updated ODU-Antenna mechanical interface Figures. Updated Transmitter Minimum Power Command, TX Power Accuracy, Synthesizer Step Size, Modulation, Rx Noise Figure, Phase Noise, Wide Channels, Return Loss specs in ODU Specifications Table.                        |
| Rev 4 | Added MTBF. Change to Note (2) to include Rx error rate performance. Changes to Env Specs (8.0). Change in ETSI References. Added 7G TR300 B1, B2 and B3. Added 8G TR310 B1, B2 and B3. Added 8G TR360 B1, B2 and B3. Changes to 18G TR1092.5 and TR1120 frequency extends. Updated finish, ground lug and cover for enclosure.                            |
| Rev A | Added 6G TR150 B1 and B2, TR160 B1 and B2, TR170 B1, TR240 B1, B2 and B3, TR252.5 B1, B2, B3, B4 and B5, TR340 B1, B2, B3 and B4. Added 13G TR200 B1, B2, B3 and B4, TR225 B1, B2, B3, B4 and B5. Added 42G TR1500 B1 and B2. Updated ODU Specs Table to include 6G and 42G. Changes to Environmental specification (8.0). Added Temperature Storage spec. |
| Rev B | Corrected T to R column in Model Numbers Table for 6G TR252 to 252.04  |
|       |  |
|       |  |

## 1.0 SCOPE

This specification describes the REMEC Broadband Wireless CTT-H Outdoor Unit (ODU) product line in terms of the various frequency ODUs that are being offered (Main Band), the range of coverage within a given frequency band (Sub-band), the ODU-to-antenna mechanical interface, and the ODU Specifications.

## 2.0 APPLICABLE DOCUMENTS

**2.1 040-50022 ODU Control Interface Protocol CTT**

**2.2 CXX ODU COMMON ASSY, CTT**

## 3.0 GENERAL REQUIREMENTS

This document specifies electrical performance for both a terminal (ODU/IDU) and a link (SYSTEM) configuration. Herein, a terminal configuration is a REMEC Broadband Wireless ODU interconnected to a TEST IDU with a low loss coaxial cable (e.g. RG8). Also, a link configuration is two terminals interconnected with variable attenuation between the two ODU antenna ports (to simulate path loss).

The specifications are guaranteed for an ODU ambient temperature range of -33 to +55 deg C with the IDU maintained at room ambient.

ETSI throughout this document refers to ETSI EN 302 217-2-2 V1.4.1 (including spectral efficiency classes) and ETSI EN 302 217-2-1 V1.3.1 unless otherwise stated.

**ETSI Modes of Operation & Radio Data Throughput \***  
(Inclusive of fixed Radio overhead)

| Modulation Type | Channel Bandwidth (MHz) |         |          |          |          |
|-----------------|-------------------------|---------|----------|----------|----------|
|                 | 7                       | 14      | 28       | 40       | 56       |
| QPSK            | 11 Mbps                 | 22 Mbps | 44 Mbps  | 64 Mbps  | 89 Mbps  |
| 16 QAM          | 22 Mbps                 | 44 Mbps | 89 Mbps  | 128 Mbps | 179 Mbps |
| 32 QAM          | 28 Mbps                 | 56 Mbps | 112 Mbps | 160 Mbps | 224 Mbps |
| 64 QAM          | 33 Mbps                 | 67 Mbps | 134 Mbps | 192 Mbps | 268 Mbps |
| 128 QAM         | 39 Mbps                 | 78 Mbps | 156 Mbps | 224 Mbps | 313 Mbps |
| 256 QAM         | 44 Mbps                 | 89 Mbps | 179 Mbps | 256 Mbps | 358 Mbps |

\* Throughput estimates based on Customer IDU with Symbol Rate @ 88% of Channel Bandwidth and approximately 10% FEC overhead.

Some modes of operation (esp. high modulations in narrow channel bandwidths) require substantial suppression of ODU phase noise by the Customer's MODEM.

**ANSI Modes of Operation & Radio Data Throughput \***  
(Inclusive of fixed Radio overhead)

| Modulation Type | Channel Bandwidth (MHz) |          |          |          |          |
|-----------------|-------------------------|----------|----------|----------|----------|
|                 | 10                      | 20       | 30       | 40       | 50       |
| QPSK            | 15 Mbps                 | 30 Mbps  | 46 Mbps  | 61 Mbps  | 77 Mbps  |
| 16 QAM          | 30 Mbps                 | 61 Mbps  | 92 Mbps  | 123 Mbps | 154 Mbps |
| 32 QAM          | 38 Mbps                 | 77 Mbps  | 115 Mbps | 154 Mbps | 193 Mbps |
| 64 QAM          | 46 Mbps                 | 92 Mbps  | 139 Mbps | 185 Mbps | 231 Mbps |
| 128 QAM         | 54 Mbps                 | 108 Mbps | 162 Mbps | 216 Mbps | 270 Mbps |
| 256 QAM         | 61 Mbps                 | 123 Mbps | 185 Mbps | 247 Mbps | 309 Mbps |

\* Throughput estimates based on Customer IDU with Symbol Rate @ 85% of Channel Bandwidth and approximately 10% FEC overhead.

Some modes of operation (esp. high modulations in narrow channel bandwidths) require substantial suppression of ODU phase noise by the Customer's MODEM.

### 3.1 ODU Model Numbers

REMEC Broadband Wireless uses a "smart" model numbering system to describe, either explicitly or implicitly (coded) the key parameters of a given ODU. Tables 1-4 describe the Model Number Structure and provide an illustrative example.

### 3.2 Antenna Mechanical Interface

The mechanical interface between the ODU and antenna is described in Figures 1, 2 and 3.

## 4.0 CHANGE TO PRODUCT

The generic model number list is subject to changes and additions in response to customer and market demands.

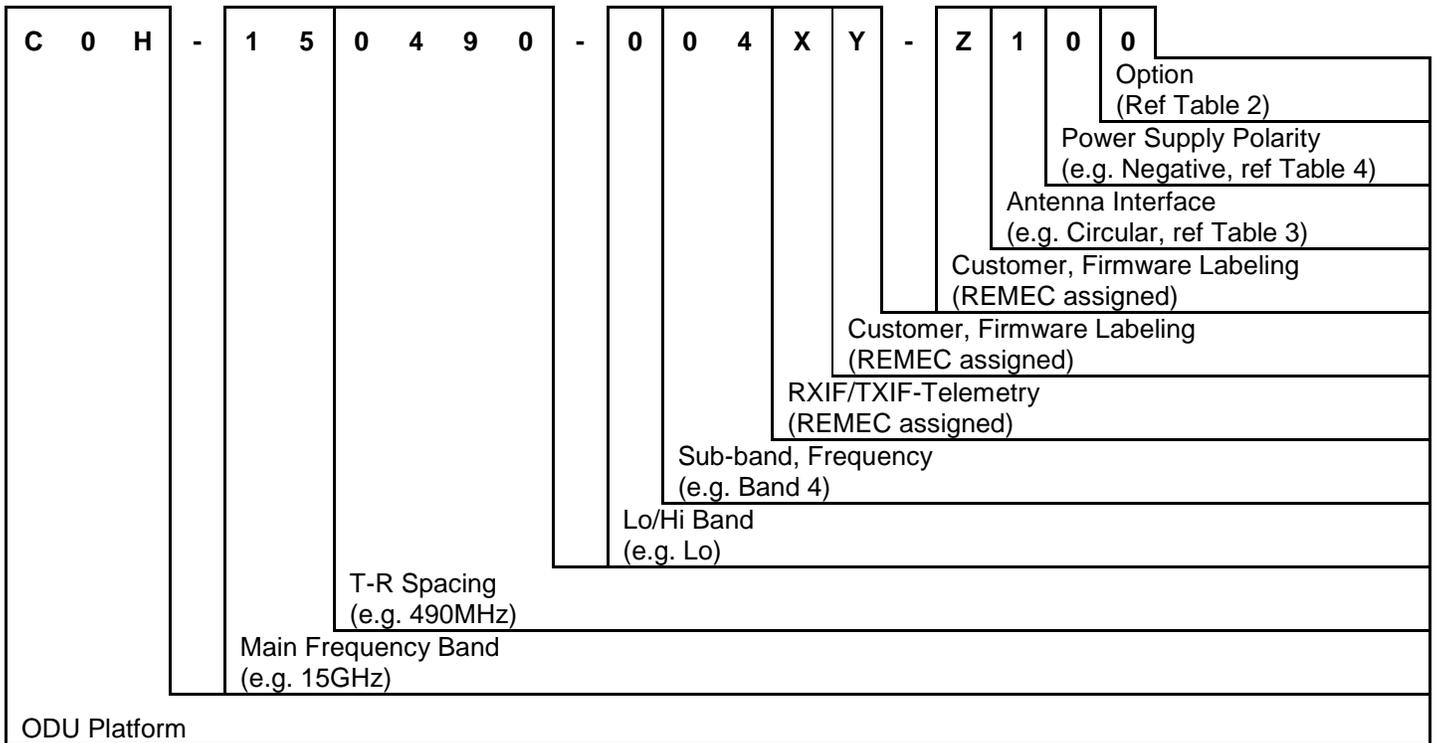

### 4.1 Change Approvals

A representative from each of the following functions must approve any change to this document prior to release:

- Marketing Management
- Engineering Management
- Program Management

5.0 TABLES

MODEL NUMBER STRUCTURE

5.1 Table 1

The Model Number Example used in Table 1 is a C0H Platform, 15GHz, 490TR, Low Band 4, with an unidentified Customer (RXIF/TXIF-Telemetry) Firmware and Labeling Requirements, Circular Antenna Interface and Negative Polarity Power Supply.

Options

(REMEC assigned)

eg. C0H-xxxxxx-xxxxx-xxxN

| Description  | "N" |
|--------------|-----|
| Standard ODU | 0   |

**(1)** Frequency ranges shown are TX minimum / maximum limits, i.e. not channel center frequencies. The lowest available channel center frequency is at least the minimum frequency shown plus one half of the selected channel bandwidth. The highest available channel center frequency is at most the maximum frequency shown less one half of the selected channel bandwidth.

\* Alternate TR supported by IDU commanding TR or RX Frequency.

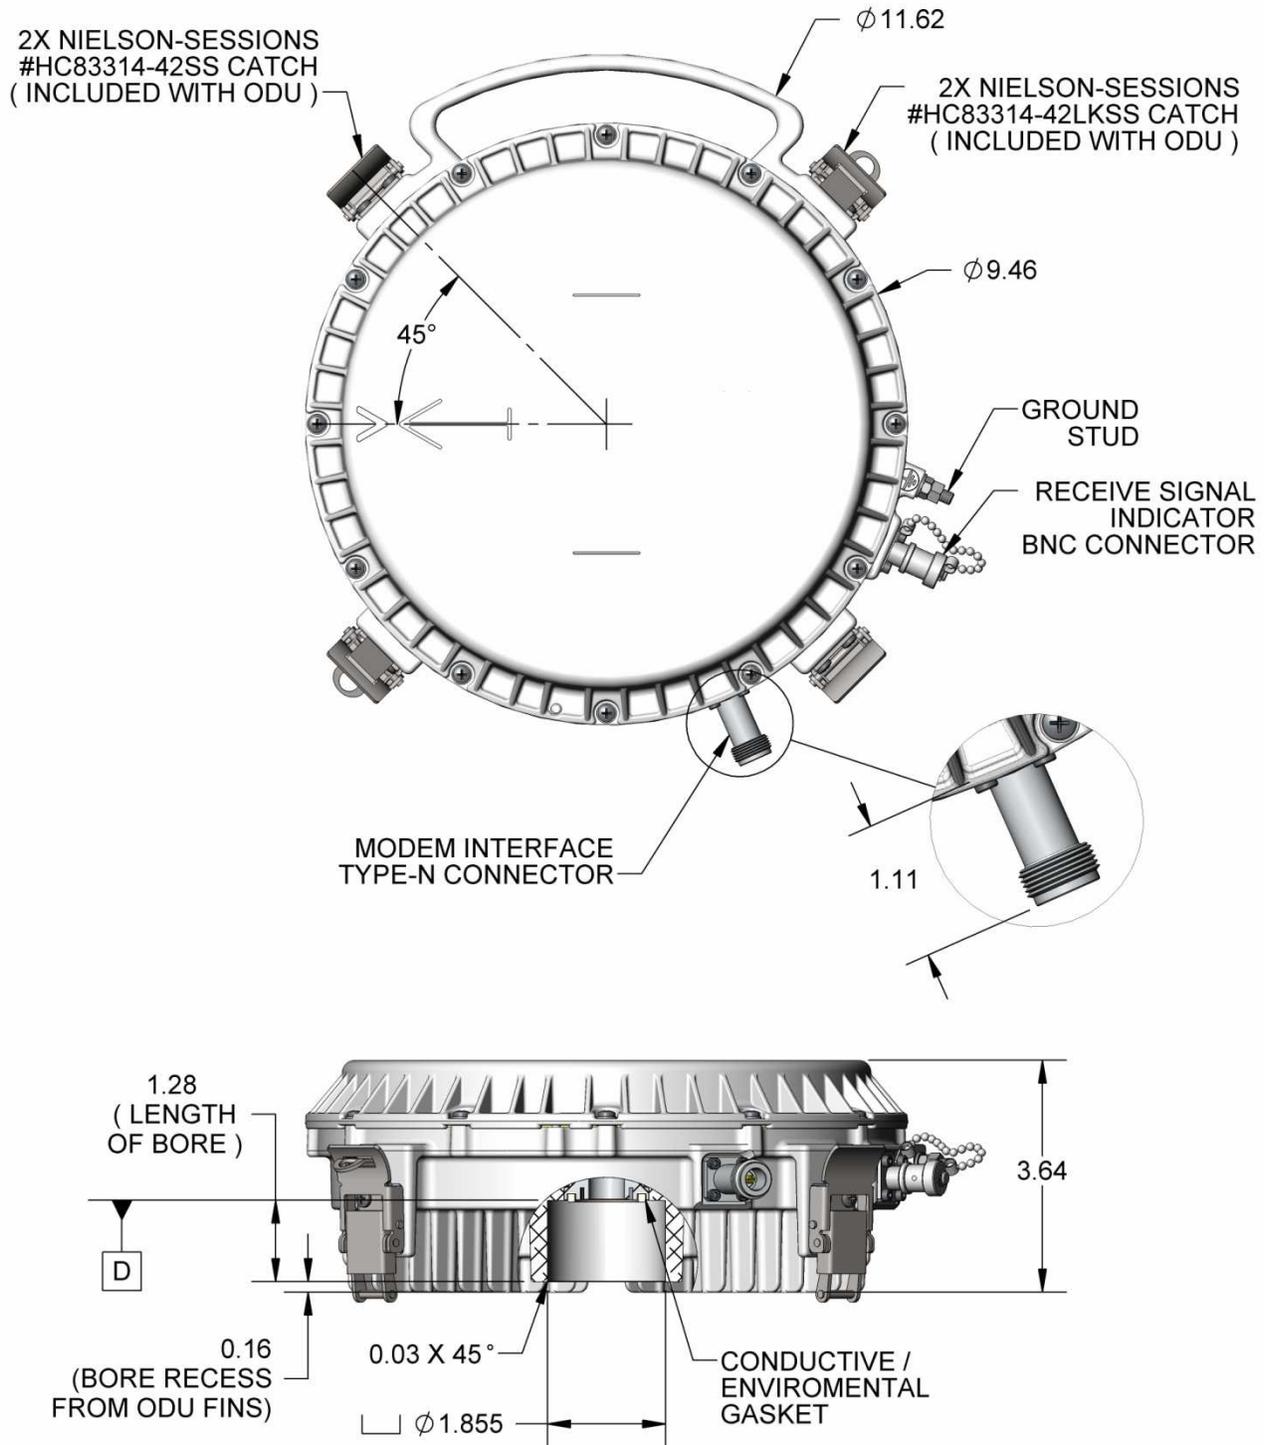

\*\* C0H-080119 Models support (per ITU) up to 28 MHz Channel Bandwidth with T/R = 119 MHz and multiple Channel Bandwidths ≤ 14 MHz with T/R = 126 MHz. C0H-110490 Models support (per FCC) up to 40 MHz Channel Bandwidth with a designated T/R of either 490 or 500 MHz.

\*\*\* C0H-060150 Models support (per FCC) up to 25 MHz Channel Bandwidth with T/R = 150 MHz.  
 C0H-060170 Models support (per FCC) up to 30 MHz Channel Bandwidth with T/R = 170 MHz.  
 C0H-130200 Models support (per FCC) a 50 MHz Channel Bandwidth with T/R = 200 MHz.  
 C0H-130225 Models support (per FCC) up to 25 MHz Channel Bandwidth with T/R = 225 MHz.

- (1) FCC Mask compliance depends on Customer’s unique MODEM attributes. Compliance with FCC Masks (which are not based on Class or Modulation Type) may either allow higher TX Power levels (except for QPSK), or may require a reduction (esp. narrow channel bandwidths below 15 GHz).
- (2) ETSI Tx Mask compliance and Rx error rate performance depends on Customer’s unique MODEM attributes. Recommended TX Power levels for Class 4 refer to compliance with ETSI 4L Masks. Compliance with more stringent Class 4H Masks will require a reduction in TX Power.
- (3) Values provided are guaranteed to be met over temperature as tested on calibrated and certified factory test stations, using industry standard best practices and equipment. An additional reduction in accuracy should be expected for Customer modulation bandwidths different than those used for receiver calibration.
- (4) Both TX Power and RX Noise Figure values must be degraded by 1 dB for T/R = 700, Bands 3 and 4.
- (5) Dielectrically loaded rectangular waveguide interface (non standard), which requires an external waveguide transition to WR137.
